

Explanatory Notes on Main Statistical Indicators

Consumer Price Indices measure the relative figures with time in prices of consumer goods and services, comprehensively reflecting the change in the price level of consumer goods and services purchased by residents.

Producer Prices Indices for Farm Products are relative figures reflecting the trend and degree of changes in producers' prices received by farmers when they sell agricultural products during a given period. These indices depict the change in the level and structure of producer prices for agricultural products and meet the needs of agricultural statistics and national accounts statistics.

Producer Price Indices for Industrial Products are relative figures reflecting the trend and degree of changes in general ex-factory prices of manufactured goods for first sale

during a given period.

Purchasing Price Indices for Industrial Producers are relative figures reflecting changes in the level and degree of purchasing prices such as intermediate input such as raw materials, fuels and power.

Price Indices for Investment in Fixed Assets reflect the trend and degree of changes in prices of investment goods and projects in fixed assets during a given period. Removing the factor of price change in the aggregates of investment at current prices, this indicator shows the changes in the prices of commodities and fees involved in the investment of fixed assets, and can be used to observe the actual size, growth, structure, and efficiency of investment in fixed assets.
